## Checkbox

I confirm that I have read and understood the information provided above.

## I want to choose this type of project:

Social Practice & Service Project

## Choose Project Title

【平行图书馆 (Parallel Library)】【Individual Application】 Students collaborate with JLL on sustainable design projects using recycled materials to create educational tools and community spaces that promote circular economy.

## Name

Lulin Qian

## NetID

lq59

## Class

2029

## Major

computer science

## Why are you interested in this project/field/industry?

The reason why I particularly wanted to join this project was because it perfectly aligned with the idea I have always believed in: that is, to make our environment and society better in a smarter and warmer way. Before, I had learned about sustainable design cases in class and also participated in community-building activities through volunteer work. But this project was the first time that I saw discarded building wood could be transformed into bookshelves that children could reach out to touch, and into desks and chairs where people could sit down and communicate. This is not just about recycling; it's about redefining the value of discarded with creativity and kindness. [As a student, I may not have much industry experience yet, but I have my own perspective and enthusiasm. I have always been interested in how design can solve problems and how activities can connect people. I have also tried to plan content and design experiences in course group projects and club activities. This project is an opportunity to turn ideas into reality. For instance, could I work with the team to design workshop for the local community in Kunshan? Or, could we plan a series of theme sharing sessions about circular economy based on the campus environment? I hope not only to learn, but also to actively participate. I want this project to have more fresh

possibilities because of the involvement of young people. |Finally, I believe that what makes it most touching for me is that it is not merely an object, but rather creates a warm and story-filled public space. In this increasingly digital era, a space that allows people to sit down and have face-to-face communication, touch the temperature of the materials, and feel the shared knowledge is particularly precious. I am looking forward to becoming a part of it, together with JLL's mentors and partners, and injecting more vitality and imagination into such a space.

**Describe the experience and skills that make you a good community leader.**

As a student majoring in Computer Science, I have always been passionate about how to solve practical problems from a cross-disciplinary perspective. In terms of community service, I have participated in and organized various campus and local volunteer activities many times, such as conducting awareness-raising classes on disability issues among primary school students and providing translation and explanation of traditional Chinese medicine culture for foreign guests. These experiences not only honed my ability to plan activities and coordinate on-site, but also taught me how to convert complex concepts into language and experiences that are easy for different audiences to understand. |In terms of project execution and team collaboration, I served as the class monitor and the project leader for the student council interview program. I also took on collaborative tasks in multiple team competitions and technical projects. These roles enabled me to accumulate experience in managing the entire process from planning to implementation, and allowed me to remain calm under pressure and efficiently advance tasks. I believe this level of execution ability will help me effectively implement aspects such as workshop design and activity plans when collaborating with the JLL team. |Furthermore, my technical background enables me to quickly understand the process logic. I have also developed an interest in sustainable issues and systemic impacts through experiences such as panda ecological research and editing content for global health podcasts. I am eager to combine my data analysis skills, innovative mindset, and passion for community service in this project, to inject a youthful and practical innovative perspective into this project.

**(For long-term projects) Describe your plan for sustaining the long-term development of this project.**

First of all, I think we can make the core content of the project more shareable. For instance, I can work with the team members to compile the waste recycling process and our past workshop experiences into a visually rich manual or a series of short videos. This way, when we go to schools or communities, everyone can quickly get started, and more students can join in, forming a "parallel library group" within the campus, continuously injecting new ideas into the project. |Secondly, I would like to try to involve more local partners in the project connection. I have participated in many campus and local events in Kunshan, and have also met some club and community workers. I can take the initiative to contact them and see if we can bring this into the extracurricular classes of primary and secondary schools, or collaborate with local coffee shops and cultural and creative spaces to hold small exhibitions and sharing sessions. Perhaps we can also assist in designing some simple experiential activities and invite enterprise employees to participate, so that the project can gradually establish its own support network. |Finally, I believe that documenting and sharing are particularly important. After each activity, I will actively collect the feedback and stories from the participants, and record them through photos, videos or words. I will then share them on the school's official website or social media. This not only allows everyone to see the progress and warmth of the project, but also attracts more people who are interested to

join. I believe that as long as more people can see, experience and be willing to participate, this project will be able to grow its own vitality and continue indefinitely.
