Checkbox

I confirm that I have read and understood the information provided above.

I want to choose this type of project:

Social Practice & Service Project

Choose Project Title

【DKU 合伙人(DKU Partner)】【Individual Application】 Students become PEER partners to support green education projects and manage volunteer systems for social innovation education in county areas.

Name

Yixuan Hang

NetID

yh494

Class

2029

Major

Intended Major: Behavioral Science, Economics track

Why are you interested in this project/field/industry?

The reason I am eager to participate in this project is because I have attended the Social Innovation Project held by DKU in the summer break. During the workshop, we learnt about the NGO PEER, which has successfully organized many activities like improving the mental health of students in county-level middle schools. I was really impressed by how different the conditions were among students in different areas. I was also touched by how PEER has changed those students' life by having those activities. Most importantly, I came to realize how lucky I am as I grew up in a relatively wealth city with supportive parents, something I do not naturally deserve. In fact, one of the most important reasons I have been able to achieve what I have is my good luck, which has made me reflect how I can use this good fortune to help others in relatively less fortunate circumstances. I believe that this project can help more people in need use the resources in DKU and also enable more DKUers to contribute to the society, just as the painting in DKU wall says: ""知识回报社会"".

Describe the experience and skills that make you a good community leader.

I was the leader of the Social Innovation Project held by DKU. I cooperated well with all my teammates and we did prototypes, brainstormed the solutions and made an interactive video about sex education. I am good at facilitating people to come up with innovative ideas collectively using my communication skills and I love how a team can overcome challenges that individuals can hardly achieve.||I have participated in CTB as well, which requires students to work collectively on a research topic. During that experience, I, along with my teammates, learnt how to make questionnaires, have interviews and wrote academic papers. By doing so, I not only learnt academic skills, but more importantly, I learnt how to complete a complex project with others jointly. Additionally, I also gained experience on how to communicate with people at different ages and backgrounds, which equipped me with capability of being a good community leader.||

(For long-term projects) Describe your plan for sustaining the long-term development of this project.

To ensure sustainable development in the long-run, I have three rough approaches now. The first one is to set clear periodic goals. The team needs to set up clear long-term goals like annual phased goals. With the aim of reaching the long-term goals, the team can then split the these goals into different phases and accomplish it phase by phase, such as monthly goals. The second approach is to establish the outcome verification mechanism. The team can work collaboratively with PEER and DKU Innovation and Entrepreneurship to verify the outcomes against the set goals. The third approach is to establish a regularized progress tracking mechanism. For example, set up weekly or biweekly meetings to sync up progress.||To cooperate effectively with the project leader, I believe it is important to actively and promptly gather information from the project leader and clarify the overall project requirements as well as available resources. Moreover, it is important to submit written achievement reports to project leaders regularly to obtain feedback, and make timely improvements.||To smoothen the process of leader transition, it is important to record important information clearly and integrate data regularly. Additionally, the outgoing leader and the incoming leader should hold a handover meeting to clarify the project goals, timeline, and the team's current progress.
